

## REFERENCE – drinking water

### Country inn Dieplinger, 4070 Puppung, Austria

**Products:** Drinking water: DOLOMIT 5/4"  
Heating water: HB-PRO 2"

... where peace and relaxation, sports and leisure activities as well as enjoyment and comfort are at home.

In a family atmosphere you will be spoiled by Chef Paula, daughter Andrea and a well-rehearsed team with seasonal delicacies.

Of course, life on the largest and longest river in Central Europe, the Danube, also determines a special awareness of water and the environment.

It was clear that when rebuilding the heating system, only one system for operation with natural, renewable fuels (wood) comes into question. On the recommendation of the installation company, it was decided to install a natural EWO heating water treatment (EWO HB Pro 2").

The existing drinking water in this area has a high degree of hardness. For this reason, an EWO DOLOMIT 5/4 "device for natural drinking water treatment was installed in the main water supply to the guest operation and in the supply line of the guesthouse, which is about a hundred meters away.

*"After checking all the installed devices and the water quality in the heating system by EWO, we can confirm the promised good effect in our hard drinking water and in the heating system too.*

***We are happy to recommend this natural method and equipment from EWO."***
